

U.S. AND CANADA - ABORTED FETAL CELL LINE PRODUCTS AND ETHICAL ALTERNATIVES

Disease	Product Name	Manufacturer	Fetal Cell Line	Ethical Version	Manufacturer	Cell Line
Chickenpox	Varivax, Varilrix	Merck, GSK	WI-38, MRC-5	None	N/A	N/A
Hepatitis A	Vaqta, Havrix Avaxim, Epaxal	Merck, GSK Sanofi, Berna	MRC-5 MRC-5	Aimmungen Not available in US	Kaketsuken (Japan & Europe)	Vero (monkey)
Hepatitis A & B Hepatitis A & Typhoid	Twinrix Vivaxim	GSK Sanofi	MRC-5 MRC-5	Engerix Hep-B Only Recombivax Hep-B Only	GSK Merck	Yeast Yeast
Measles/Mumps/Rubella	MMR, Priorix	Merck, GSK	RA273, WI-38	None	N/A	N/A
Measles-Rubella	MR Vax Eolarix	Merck GSK.	RA273, WI-38 RA273, MRC-5	Attenuvax (Measles Only)	Merck	Chick embryo
Mumps-Rubella	Biavax II	Merck	RA273, WI-38	Mumpsavax (Mumps Only)	Merck	Chick embryo
Rubella	Meruvax II	Merck.	RA273, WI-38	Takahashi Not available in US	Kitasato Institute (Japan & Europe)	Rabbit
MMR + Chickenpox	ProQuad/MMR-V	Merck.	RA273, WI-38, MRC-5	None	N/A	N/A
Polio	Poliovax, DT Polio Adsorb.	Sanofi Pasteur	MRC-5	IPOL	Sanofi Pasteur	Vero (monkey)
Polio Combination (DTaP + polio+ HiB)	Pentacel, Quadracel Infanrix-Hexa	Sanofi Pasteur	MRC-5	Pediacel; Pediarix + HiB IPOL + any DTaP	Sanofi GSK	Vero (monkey)
Rabies	Imovax	Sanofi Pasteur	MRC-5	RabAvert	Chiron	Chick embryo
Rheumatoid Arthritis	Enbrel	Amgen	WI-26 VA4	Humira	Abbott Labs	CH Hamster Ovary
Sepsis	Xigris	Eli Lilly	HEK-293	Ask your doctor	N/A	N/A
Shingles	Zostavax	Merck.	WI-38, MRC-5	None	N/A	N/A
New: Smallpox	Acambis 1000	Acambis	MRC-5	ACAM2000, MVA3000	Acambis/Baxter	Vero, Chick Embryo
In Development Ebola	TBA	Crucell/NIH	PER C6	None	N/A	N/A
In Development Flu, Avian Flu	TBA	MedImmune Vaxin, Sanofi	PER C6, HEK-293	FluVirin, Flu Shield, Flumist, FluZone, FluBlok	Chiron, Medimmune Sanofi, Protein Sci.	Chick embryo Caterpillar
In Development: HIV	MRKAd5 HIV-1	Merck	PER C6	None	N/A	N/A

Note: Immune-Globulin shots will provide temporary immunity (4-6 months) for Hepatitis-A and Rubella (3 months)

Physician Order Line:

Merck (Measles, Mumps) 800-422-9675

GSK: (Hepatitis-B) 866-475-8222

Sanofi Pasteur: (Polio) 800-822-2463

Chiron:(Rabies) 800 244-7668 (PST)

NOTE: ANY VACCINE NOT LISTED ABOVE DOES NOT USE ABORTED FETAL CELL LINES.

Current Trends

Because the pharmaceutical industry perceives public acceptance of the current vaccines, they continue to utilize both existing and new aborted fetal sources for vaccine development. The latest is a new fetal cell line, PER C6, created by Dutch pharmaceutical, Crucell, NV. This cell line uses the retinal tissue of an 18-week gestation baby, created specifically for vaccine development.

A Choice – And A Moral Duty!

Similar to adult stem cell therapies, which are viable alternatives to using destroyed human embryos, vaccines can be made using ethical sources. Instead, the present tainted vaccines have been used to justify further immoral research. In Aug., 2001 President Bush rationalized funding embryonic stem cell research by using the chickenpox vaccine as a precedent, since the embryos, like the aborted babies, had already been destroyed. But in both cases, human beings were intentionally and callously slaughtered for research purposes. Unless the public refuses to tolerate this exploitation of our unborn, it will only worsen. We were successful with our smallpox campaign by demanding an ethical alternative and we must continue this sort of pressure. In a recent Vatican document, our moral duty to do just that was made abundantly clear:

“Doctors and fathers of families have a duty to take recourse to alternative vaccines...putting pressure on the political authorities and health systems so that other vaccines without moral problems become available. They should take recourse, if necessary, to the use of conscientious objection with regard to the use of vaccines produced by means of cell lines of aborted human foetal origin. Equally, they should oppose by all means in writing, through the various associations, mass media, etc., the vaccines which do not yet have morally acceptable alternatives, creating pressure so that alternative vaccines are prepared, which are not connected with the abortion of a human foetus, and requesting rigorous legal control of the pharmaceutical industry producers.” (PAFL, June 2005)

How Can You Help?

- Ask your doctor to supply the existing ethical alternatives
- Support our FLICA legislation which demands fair labeling and informed choice on medical products using aborted fetal or embryonic cell lines
- Get the word out – let the Pharmaceutical Companies know how you feel - and join

The Campaign For Ethical Vaccines

To read about our legislation, obtain copies of our petition or for further information, visit our website:

Children of God For Life

VACCINES FROM ABORTION THE HIDDEN TRUTH

For over thirty years pharmaceutical companies have been quietly producing vaccines using the remains of aborted babies, a fact that was deliberately hidden from the general public for decades. But as the grisly details emerged through several pro-life publications, a growing number of parents and physicians were both shocked and deeply disturbed to discover the truth surrounding these vaccines – and rightfully so! What follows is just the tip of the iceberg!

During the 1964 Rubella epidemic some doctors advised rubella-infected pregnant women to abort their children, based on the fear their child might be born with birth defects. Working along side these doctors, researchers collected the live fetal tissue. Ultimately, they extracted the virus from the 27th aborted baby's kidney, labeling it RA273. (R=Rubella, A=Abortus, 27=27th abortion in the study, 3=3rd tissue explanted) This virus was then cultivated on WI-38 (Wistar Institute No. 38) a cell line produced from the lung tissue of a 3 months gestation female baby, electively aborted in Sweden. But prior to perfecting WI-38, there were numerous other abortions involved in the research. Ultimately, scientists documented at least 61 elective abortions to produce the rubella vaccine alone.

Following the US lead, 10 years later scientists in the UK developed MRC-5, taken from the lung tissue of a male baby aborted at 14 weeks gestation. These two fetal cell lines are used to continuously cultivate the weakened virus strains of several diseases to produce vaccines.
